**5/16" Sealing Washer**

Material: stainless steel, EPDM insert

**5/16" Lag Bolt**

Material: stainless steel
Assembly

1. LOCATE RAFTERS

Locate the rafters and snap horizontal and vertical lines (measured according to CrossRail Shared Rail Assembly Instructions) to mark the installation position for each EverFlash eComp flashing.

Materials Required: Measuring tape, string line

2. BREAK SEALS

It is important to remove any obstructing nails in the 2nd course of shingles as they can prevent the flashing from extending up under the 3rd course of shingles.

This is required by the roofing manufacturer's instructions and warranties, and the Asphalt Roofing Manufacturer's Association guidelines.

Use roofing bar to break the seals between the 1st and 2nd, and 2nd and 3rd shingle courses. Be sure to remove all nails to allow correct placement of flashing.

Materials Required: Roofing bar

3. DRILL PILOT HOLE

Drill a 1/4” pilot hole by drilling square to the rafter using a 1/4” drill bit.

Materials Required: 1/4” drill bit, drill
4 SEAL PILOT HOLE

Filling the pilot hole with sealant is a secondary waterproofing step, which is required by the roofing manufacturers.

Materials Required: Appropriate sealant

5 OPTIONAL: SEAL FLASHING

Apply an upside-down U-shape bead of sealant to the underside of the flashing before insertion.

Materials Required: EverFlash eComp flashing, appropriate sealant

6 INSERT FLASHING

Slide the eComp flashing under the 2nd course of shingles so that the bottom flashing edge does not overhang the butt edge of the shingles. This requirement ensures that the flashing extends up under the 3rd course of shingles and the minimum headlap is achieved.

Materials Required: EverFlash eComp flashing
